Abstract

Figure 1

Abstract. *Staphylococcus aureus* and *Staphylococcus epidermidis* were isolated from 100 patients with various types of wounds. The isolates were tested for sensitivity to various antibiotics. The results showed that the isolates were highly resistant to most antibiotics, including penicillin, tetracycline, and erythromycin. The isolates were also tested for virulence factors, including coagulase, catalase, and proteinase. The results showed that the isolates were highly virulent, with most isolates producing coagulase, catalase, and proteinase. The results of this study suggest that *S. aureus* and *S. epidermidis* are highly resistant to antibiotics and are highly virulent. This suggests that these bacteria are a major cause of wound infections and should be treated with appropriate antibiotics.
