Architectural Drawing

1. The first step in the design process is to define the problem and the goals of the project.

2. The second step is to gather information and research the problem.

3. The third step is to generate ideas and develop a concept.

4. The fourth step is to create a prototype and test it.

5. The fifth step is to refine the design and prepare for construction.

6. The sixth step is to construct the final design.

7. The seventh step is to evaluate the design and its performance.

8. The eighth step is to document the design process.

9. The ninth step is to present the design to the client.

10. The tenth step is to complete the project.
